```python
# Python program to create Bankaccount
class
# with both a deposit() and a withdraw()
function
class Bank_Account:
    def __init__(self):
        self.balance=0
        print("Hello!!! Welcome to the Deposit
& Withdrawal Machine")

    def deposit(self):
        amount=float(input("Enter amount to
be Deposited: "))
        self.balance += amount
        print("\n Amount Deposited:",amount)

    def withdraw(self):
        amount = float(input("Enter amount to
be Withdrawn: "))
        if self.balance>=amount:
            self.balance-=amount
```

```python
            print("\n You Withdrew:", amount)
        else:
            print("\n Insufficient balance  ")

    def display(self):
        print("\n Net Available
Balance=",self.balance)

# Driver code

# creating an object of class
s = Bank_Account()

# Calling functions with that class object
s.deposit()
s.withdraw()
s.display()
```
